

# FIT ACE LARGE CAP CORE

## KEY HIGHLIGHTS

- \* The portfolio **invests in companies of all sizes** (ACE = All Cap Equity). This allows for higher diversification and greater breadth of holdings.
- \* By holding individual stocks we can **monitor and deploy tax strategies** throughout the year. This can lead to lower taxes in both the short and long term.
- \* When selling stocks our process is designed to **eliminate emotional bias** by using technical analysis to tell us when the stock is "broken".
- \* The portfolio invests in **both value and growth** companies. We can invest up to 100% in either investment style. Our process will determine the outcome of which discipline is over/under-weighted.

## STRATEGY DESCRIPTION

The FIT ACE Large Cap Core portfolio invests in companies of all sizes listed on U.S. domestic stock exchanges. Although there are no restrictions on how much the portfolio can invest in smaller and mid-size companies, the portfolio typically focuses on larger and mega cap companies. Our internal buying process using fundamental and technical analysis will help in the discovery of both value and growth-oriented stocks with no static percent required for either discipline. 100% Technical Analysis is used to sell stocks. Using Technical Analysis to sell individual stocks in the portfolio keeps us disciplined to our process and helps avoid emotional attachment to any one position.
